GSLV Rockets:

GSLV or the Geosynchronous Satellite Launch Vehicle is an expendable launch system operated by ISRO (Indian Space Research Organisation).GSLV has been used in thirteen launches to date since its first launch in 2001 to the most recent on 19th December 2018 carrying the GSAT-7A military communications satellite. The GSLV project was initiated in 1990 with the objective of acquiring an Indian Launch capability for geosynchronous satellites. GSLV uses major components that are already been proven in the PSLV launchers in the form of the S125/S139 solid rocket booster and the liquid-fueled Vikas engine. The GSLV was the first rocket to use Cryogenic Engines for its flight. The GSLV rocket has a height of 49.13m, diameter of 2.8m, Mass of 414,750kg and has 3 stages.

GSLV-MK-I

Flight No.	Date	Launch site	Payload	Payload Mass	Orbit	Launch Outcome
D1	18th April 2001	1st Launch Pad of Sriharikota	GSAT-1	1540kg	GTO	Partial Failure
D2	8th May 2003	1st Launch Pad of Sriharikota	GSAT-2	1825kg	GTO	Success
F01	20th Sep 2004	1st Launch Pad of Sriharikota	GSAT-3	1950kg	GTO	Success
F02	10th Jul 2006	2nd Launch Pad of Sriharikota	INSAT-4C	2168kg	GTO	Failure

GSLV MK-II

Flight no.	Date	Launch site	Payload	Payload Mass	Orbit	Launch Outcome

D3	15th Apr 2010	2nd Launch Pad of Sriharikota	GSAT-4	2220kg	GTO	Failure
D5	5th Jan 2014	2nd Launch Pad of Sriharikota	GSAT-14	1980kg	GTO	Success
D6	27th Aug 2015	2nd Launch Pad of Sriharikota	GSAT-6	2117kg	GTO	Success
F05	8th Sep 2016	2nd Launch Pad of Sriharikota	INSAT-3DR	2211kg	GTO	Success
