SpaceX Full content:

Falcon 9 Rockets:

Falcon 9 is a two staged medium lift launch vehicle designed and manufactured by SpaceX in the United States. It is made by Merlin engines. It had burning liquid nitrogen and rocket-grand kerosene propellants. There are nine engines in the first stage of the rocket. It has also developed in its expendable launch systems, Falcon 9 is partially reusable, with the first stage capable of re-entering the atmosphere and landing back vertically. The Falcon 9 has a height of around 70m, has a diameter of 3.7m, has a mass of around 55,000kg and has 2 stages. Let's see information about the payload of this rocket. This rocket has a Payload of 22,800kg to LEO orbit, 8,300kg to GTO, 4,020kg to Mars (heliocentric orbit).

S. no	Year	No. of rockets	Launch Outcome
1.	2010	2	Success
2.	2011	0	N.A
3.	2012	1,1	Success, Partial Failure
4.	2013	3	Success
5.	2014	6	Success
6.	2015	6,1	Success, Failure
7.	2016	8,1	Success
8.	2017	19	Success
9.	2018	21	Success
10.	2019	10	Success

Falcon Heavy Rockets:

Falcon Heavy is a large and a partially reusable heavy-lift launch vehicle designed and manufactured by SpaceX. This Rocket has a strengthened Falcon 9-like first stage. It has a two additional first stages as strap-on boosters. The Falcon heavy has one of the highest payload capacity of

any currently operational launch vehicle. Initially, this rocket was mainly designed to carry humans into space beyond low Earth orbit. Later, it was not given a human-rating certification for carrying humans to space. The falcon heavy was designed from the falcon 9's fuselage (body of the rocket).This rocket has a height of 70m with a diameter of 3.66m.It has a width is 12.2m and has a mass of 1,420,000kg.It has 2 stages and can also have additional stages if required. It's payload to LEO is aorund 64,000kg and has a payload of 27,000kg to GTO.

Flight No.	Launch Date	Payload	Launch Outcome
1.	16th Feb 2018	Elon Musk's Tesla Roadster (1,250kg)	Success
2.	11th Apr 2019	Arabsat-6A (6,465kg)	Success
3.	25th June 2019	USAF-SP2 (3,700kg)	Success

Dragon Spacecraft:

Dragon 2 or Crew Dragon is a reusable spacecraft developed and manufactured by SpaceX. The space launches atop a Flacon 9 Block 5 rocket and returns via ocean splash down. The Dragon has a large windows and new flight computers and solar arrays than the Dragon. There are two variations of this spacecraft, one for a crew and one for the cargo of the parts, satellites, etc. The crew Dragon has an integrated escape system which allows the astronaut to escape in an emergency. The designed life of dragon is 1 week (free flight) and 210 days when docked to ISS. It has a dry mass of 10,000kg and a payload of 6,000kg.7 people can sit in this machine. It has a diameter of 4m and height of 8.1m with a side wall angle of 15 degrees.

Mission	Capsule No.	Launch Date	Launch Outcome
Dragon 2 pad absorb test	Dragon Fly	6th May 2015	Success
SpX-DM1	C201	2nd March 2019	Success
